Mobius Asset Management

Program Description: Custom Trading Program

The Mobius Asset Management Custom Trading Program trades a select sector of financial and commodity instruments. The primary objective of the trading program is to deliver to clients attractive rates of return while adhering to prudent risk management procedures. The Program was developed with a minimum investment of \$100,000 in order to give both individual and institutional investors the opportunity to invest in a professional and highly disciplined non-traditional management area.

The commodities currently traded are Gold, Silver, Treasury Notes, Treasury Bonds, Stock Indices, Euro Currency, Soybeans, Soybean Oil, Corn and Crude Oil. The advisor reserves the right to add and delete commodities when needed and without prior notice.

The Program is technical in nature and entirely systematic. The Program is designed to detect early trend development using a blend of trend following and counter trend systems. Each commodity traded within the Program has its own unique trading parameters. These parameters measure the volatility of each generated trading signal and its overall effect to the entire portfolio in regard to position size and the ability to add to existing positions when warranted. The trading Program employs a proprietary risk management overlay that monitors position size based on market volatility.

The Program is committed to adhere to strict money management techniques as an integral part of the trading program. The proprietary risk management utilizes pre-determined stop loss points, which attempt to limit losses and protect gains. Each commodity traded has specific entry and exit points along with stop levels for existing positions. These are updated daily. It should be noted that stop-loss points are not guaranteed to limit loss to the stop-loss point because, in part, they are determined by the Advisor's evaluation of historical market volatility and liquidity.

The Program determines position size as a function of both individual commodity volatility and total portfolio volatility. As volatility increases, position size will tend to decrease and when volatility decreases, position size will increase. The margin to equity ratio will be approximately 20-30%.

Program Description: Energy Trading Program

The Mobius Asset Management Energy Weighted Trading Program is trend following and is based on several systematic technical methodologies. Trading decisions are driven by a proprietary multi-system approach that seeks to capture changes in short term and long-term price momentum. One of the significances of the program is its capacity to respond quickly to directional changes. The Program was developed with a minimum investment of \$300,000 in order to give both individual and institutional investors the opportunity to invest in a professional and highly disciplined non-traditional trading approach. Additional funds can be added in \$300,000 increments.

THE RISK OF LOSS IN TRADING FUTURES, OPTIONS AND OFF-EXCHANGE FOREX CAN BE SUBSTANTIAL.
PAST RESULTS ARE NOT NECESSARILY INDICATIVE OF FUTURE RESULTS.

The commodities currently traded in the Energy Weighted Program includes, Crude Oil, Heating Oil, Unleaded Gasoline, Natural Gas, Gold, Treasury Bonds and Treasury Notes. The advisor reserves the right to add and delete commodities when needed and without prior notice.

A strict money management discipline is in place. The Mobius risk management overlay utilizes pre-determined stop loss points, which attempt to limit losses and protect gains. Each commodity traded has specific entry and exit points along with stop levels for existing positions. These are updated daily. It should be noted that stop-loss points are not guaranteed to limit loss to the stop-loss price because they are determined by the Advisor's evaluation of historical market volatility and liquidity. The margin to equity ratio will be approximately 25-30%.
